Panel discussion

- How will P2P algorithms develop?
  - Research of multiple Ring structures, how do they organize themselves, how do they merge, split, inter-operate?
- Application-dependent algorithms
  - Voice-over-IP (P2PSIP)
  - VoiPeer (trunking)
  - ENUM-P2P
- Is P2P research biased towards:
  - Adhoc systems
  - Sensors
  - But is P2P limited to “chaotic“ environments, and User Equipment only?
- Will P2P remain an independent field (within “Distributed systems“)
  - Are there departments at universities called “P2P research“?
  - What about separation from the GRID? → Oracle 10 supports GRID, for example
  - Improving P2P as “reliable distributed systems“
